

Program Updates

What are Program Updates?

From time to time we will update our software. Maybe there are some small issues that have been tweaked or changed since when you first downloaded the software. Sometimes we add new features or change the way a particular part of the program operates. These updates are very important because just as you keep a car maintained to keep it running smoothly, it is the same with software.

Each time a program update is released the “version number” of the software changes. The version number lets us know if you have the latest software updates. To locate the version number, click on the Help menu and select About. Click on the Program Info tab to view details.

Who Qualifies for Program Updates

If you have our Direct Connect Service Plan which is only \$3.99 a month, you will be granted access to these updates. If you do not have the Direct Connect Service Plan, you will not be able to update your software.

To sign up for the Direct Connect Service Plan, just click on Help – Purchase Service Plan.

How to Access Program Updates

Avonto Direct Connect checks for program updates automatically each time you open your software. All you need to do is have an internet connection and an active Direct Connect Service Plan. If you are unsure if you have the latest version, or have any questions, please contact us directly. Having an outdated version of the software could cause problems with sending orders electronically to your vendors. This is why we do it automatically for you! We make it super easy to stay updated!
